On the Fireline Matthew Desmond 2008-11-15 In this rugged account of a rugged profession, Matthew Desmond explores the heart and soul of the wildland firefighter. Having joined a firecrew in Northern Arizona as a young man, Desmond relates his experiences with intimate knowledge and native ease, adroitly balancing emotion with analysis and action with insight. On the Fireline shows that these firefighters aren't the adrenaline junkies or romantic heroes as they're so often portrayed. An immersion into a dangerous world, On the Fireline is also a sophisticated analysis of a high-risk profession—and a captivating read. “Gripping . . . a masterful account of how young men are able to face down wildfire, and why they volunteer for such an enterprise in the first place.”—David Grazian, Sociological Forum “Along with the risks and sorrow, Desmond also presents the humor and camaraderie of ordinary men performing extraordinary tasks. . . . A good complement to Norman Maclean's Young Men and Fire. Recommended.”—Library Journal

Mustang by Design James Dinsmore 2018-09-14 p.p1 {margin: 0.0px 0.0px 0.0px 0.0px; font: 12.0px Arial} Without question, the 1964-1/2 Mustang is one of the most important and influential cars in automotive history. When Ford launched the Mustang, it created an automotive revolution. Award-winning designer and stylist Gale Halderman was at the epicenter of the action at Ford, and, in fact, his initial design sketch formed the basis of the new Mustang. He reveals his involvement in the project as well as telling the entire story of the design and development of the Mustang. Authors and Mustang enthusiasts James Dinsmore and James Halderman go beyond the front doors at Ford into the design center, testing grounds, and Ford facilities to get the real, unvarnished story. Gale Halderman offers a unique behind-the-scenes perspective and firsthand account of the inception, design, development, and production of the original Mustang. With stinging losses from the Edsel fresh in minds at Ford, the Mustang project was an uphill battle from day one. Lee Iacocca and his assembled team had a herculean task to convince Henry Ford II to take a risk on a new concept of automobile, but with the help of Hal Sperlich's detailed market research, the project received the green light. Henry Ford II made it clear that jobs were on the line, including Iacocca's, if it failed. The process of taking a car from sketch to clay model to prototype to preproduction and finally finished model is retraced in insightful detail. During the process, many fascinating experimental cars, such as the Mustang I two-seater, Mustang II prototype, Mustang Allegro, and Shorty, were built. But eventually the Mustang, based on the existing Ford Falcon, received the nod for final production. In a gala event, it was unveiled at the 1964 World's Fair in New York. The Mustang received public accolades and critical acclaim, and soon it became a runaway hit. After the initial success, Ford designers and Gale Halderman designed and developed the first fastback Mustangs to compliment the coupes. The classic Mustang muscle cars to follow, including the GT, Mach 1, and others, are profiled as well. The Mustang changed automotive history and ushered in the pony car era as a nimble, powerful, and elegantly styled sports coupe. But it could so easily have stumbled and wound up on the scrap pile of failed new projects. This is the remarkable and dramatic story of how the Mustang came to life, the demanding design and development process, and, ultimately, the triumph of the iconic American car.

Information Visualization Robert Spence 2014-11-03 Information visualization is the act of gaining insight into data, and is carried out by virtually everyone. It is usually facilitated by turning data - often a collection of numbers - into images that allow much easier comprehension. Everyone benefits from information visualization, whether internet shopping, investigating fraud or indulging an interest in art. So no assumptions are made about specialist background knowledge in, for example, computer science, mathematics, programming or human cognition. Indeed, the book is directed at two main audiences. One comprises first year students of any discipline. The other comprises graduates - again of any discipline - who are taking a one- or two-year course of training to be visual and interaction designers. By focusing on the activity of design the pedagogical approach adopted by the book is based on the view that the best way to learn about the subject is to do it, to be creative: not to prepare for the ubiquitous examination paper. The content of the book, and the associated exercises, are typically used to support five creative design exercises, the final one being a group project mirroring the activity of a consultancy

undertaking a design (not an implementation) for a client. Engagement with the material of this book can have a variety of outcomes. The composer of a school newsletter and the applicant for a multi-million investment should both be able to convey their message more effectively, and the curator of an exhibition will have new presentational techniques on their palette. For those students training to be visual/interaction designers the exercises have led to original and stimulating outcomes.

Green Capitalism. the God That Failed Richard Smith 2016-05-11 Smith contends that there is no possible solution to our global ecological crisis within the framework of any conceivable capitalism. The only alternative to market-driven planetary collapse is to transition to a largely planned, mostly publicly-owned economy based on production for need, on democratic governance and rough socio-economic equality, and on contraction and convergence between the global North and South. "Smith brings an impressive command of economics and an engaging conversational style of writing. He explains and illustrates with devastating clarity the key mechanisms of capitalism that force it to grow unendingly ... In the final two chapters, Smith outlines ecological constraints necessary for any post-capitalist economy and describes ecosocialist alternatives to capitalism. The necessary changes are staggering... To that end he outlines a number of attractive and attainable features of an ecosocialist society." David Klein, Director of the climate Science Program at California State University and author of "Capitalism and Climate Change"

Knocking the Hustle Lester Spence 2015-12-10 Over the past several years scholars, activists, and analysts have begun to examine the growing divide between the wealthy and the rest of us, suggesting that the divide can be traced to the neoliberal turn. "I'm not a business man; I'm a business, man." Perhaps no better statement gets at the heart of this turn. Increasingly we're being forced to think of ourselves in entrepreneurial terms, forced to take more and more responsibility for developing our "human capital." Furthermore a range of institutions from churches to schools to entire cities have been remade, restructured to in order to perform like businesses. Finally, even political concepts like freedom, and democracy have been significantly altered. As a result we face higher levels of inequality than any other time over the last century. In *Knocking the Hustle: Against the Neoliberal Turn in Black Politics*, Lester K. Spence writes the first book length effort to chart the effects of this transformation on African American communities, in an attempt to revitalize the black political imagination. Rather than asking black men and women to "hustle harder" Spence criticizes the act of hustling itself as a tactic used to demobilize and disempower the communities most in need of empowerment.
