#### **AIR CRASH INVESTIGATIONS - THE BOEING 737 MAX DISASTER PART II -The Crash of Ethiopian Airlines Flight 302**

Dirk Barreveld 2021-11-11 On March 10, 2019, at 05:38 UTC, Ethiopian Airlines flight 302, Boeing 737-8 (MAX), ET-AVJ, took off as a scheduled international flight, from Addis Ababa Bole International Airport bound to Nairobi, Kenya. It departed Addis Ababa with 157 persons on board: 2 flight crew (a Captain and a First Officer), 5 cabin crew and one IFSO, 149 regular passengers. The take-off roll and lift-off was normal, including normal values of left and right angle-of-attack (AOA). Shortly after liftoff, the left Angle of Attack sensor recorded value became erroneous and the left stick shaker activated and remained active until near the end of the recording. In addition, the airspeed and altitude values from the left air data system began deviating from the corresponding right side values. The left and right recorded AOA values began deviating. At 5:40:22, the second automatic nose-down trim activated. Following nose-down trim activation GPWS DON'T SINK sounded for 3 seconds and "PULL UP" also displayed on PFD for 3 seconds. The Captain was unable to maintain the flight

path and requested to return back to the departure airport. At 05:43:21, an automatic nose-down trim activated for about 5 s. The stabilizer moved from 2.3 to 1 unit. The rate of climb decreased followed by a descent in 3 s after the automatic trim activation. The descent rate and the airspeed continued increasing. Computed airspeed values reached 500kt, pitch and descent rate values were greater than 33,000 ft/min. Finally; both recorders stopped recording at around 05:44 the Aircraft impacted terrain 28 NM South East of Addis Ababa near Ejere. All 157 persons on board: 2 flight crew, 5 cabin crew and one IFSO, and 149 regular passengers were fatally injured. The crash of Ethiopian Airlines Flight 302 was, after the crash of Lion Air Flight 610 on October 29, 2018, the second crash of a Boeing 737 MAX 8 within a period of 4 months.

**Flying Blind** Peter Robison 2021-11-30 NEW YORK TIMES BUSINESS BEST SELLER • A suspenseful behind-the-scenes look at the dysfunction that contributed to one of the worst tragedies in modern aviation: the 2018 and 2019 crashes of the Boeing 737 MAX. An "authoritative, gripping and finely detailed narrative that charts the decline of one of the great American companies" (New York Times Book Review), from the award-winning reporter for Bloomberg. Boeing is a century-old titan of industry. It played a major role in the early days of commercial flight, World War II bombing missions, and moon landings. The planemaker remains a cornerstone of the U.S. economy, as well as a linchpin in the awesome routine of modern air travel. But in 2018 and 2019, two crashes of the Boeing 737 MAX 8 killed 346 people. The crashes exposed a shocking pattern of malfeasance, leading to the biggest crisis in the company's history—and one of the costliest corporate scandals ever. How did things go so horribly wrong at Boeing? *Flying Blind* is the definitive exposé of the disasters that transfixed the world. Drawing from exclusive interviews with current and former employees of Boeing and the FAA; industry executives and analysts; and family members of the victims, it reveals how a broken corporate culture paved the way for catastrophe. It shows how in the race to beat the competition and reward top executives, Boeing skimped on testing, pressured employees to meet unrealistic deadlines, and convinced regulators to put planes into service without properly equipping them or their pilots for flight. It examines how the company, once a treasured American innovator, became obsessed with the bottom line, putting

shareholders over customers, employees, and communities. By Bloomberg investigative journalist Peter Robison, who covered Boeing as a beat reporter during the company's fateful merger with McDonnell Douglas in the late '90s, this is the story of a business gone wildly off course. At once riveting and disturbing, it shows how an iconic company fell prey to a win-at-all-costs mentality, threatening an industry and endangering countless lives.

Aim/Far Charles F. Spence 2006-10 AIM/FAR is a meticulously accurate and always up to date resource of federally required rules and regulations for general aviation flying, covering the most important issues

pilots face. Editor Charlie Spence tracks the FAA changes and rulemaking throughout the year to bring pilots the best, most complete information possible for current conditions. More FARs and value-added content than the competition. McGraw-Hill AIM/FAR is customized to General Aviation market; we don't just reprint, we employ an expert editor to update this essential annual guide to Federal Aviation Regulations (FAR) and Aeronautical Information Manual (AIM). Changes are highlighted and explained; index is extensive; coverage is expansive and as current as the year allows. Spence adds directories to weather websites, aviation facilities, officials, NTSB, and more, including study suggestions for test and flight review. The book's physical readability is superb—thanks to typesetting and to editorial organization. Online update zone year round at:

### New Materials for Next-Generation Commercial Transports

National Research Council 1996-03-15  
The major objective of this book was to identify issues related to the introduction of new materials and the effects that advanced materials will have on the durability and

technical risk of future civil aircraft throughout their service life. The committee investigated the new materials and structural concepts that are likely to be incorporated into next generation commercial aircraft and the factors influencing application decisions. Based on these predictions, the committee attempted to identify the design, characterization, monitoring, and maintenance issues that are critical for the introduction of advanced materials and structural concepts into future aircraft.
