The Routledge Handbook of Tourism and the Environment Andrew Holden 2012 The Routledge Handbook of Tourism and the Environment explores and critically evaluates the debates and controversies inherent to tourism's relationship with nature, especially pertinent at a time of major re-evaluation of our relationship with the environment as a consequence of the environmental problems we now face. It brings together leading specialists from range of disciplinary backgrounds and geographical regions, to provide state-of-the-art theoretical reflection and empirical research on this complex relationship and future direction. The book is divided into five interrelated sections. Section one evaluates the philosophical basis, rationale and complexity of what is meant by the term 'environment' considering the major influences in the construction of how we understand our surroundings and the types of values we place upon them. Section two evaluates the types of eco-systems that are used as natural resources for tourism and the negative and positive impacts upon them. Section three evaluates relevant environmental policy and management mechanisms for the impacts of tourism on the natural environment. Section four focuses on the changing tourism-environment relationship, and the types of tourism that have become established in the tourism industry, market and policy. Section five, analyzes contemporary and future issues of the tourism-environment relationship, based upon themes of environmental and social welfare. This timely book will provide an invaluable resource for all those with an interest in tourism's relationship with the natural environment, encouraging dialogue across disciplinary boundaries and areas of study. The book is international in its focus, emphasizing that issues of tourism and the natural environment are not only localized but transcend national boundaries that sometimes require both international and global responses. This is essential reading for student, researchers and academics of Tourism as well as those of Geography, Environmental Studies and Development Studies.

Cooperative Evolution Christopher Bryant 2021-03-16 Cooperative Evolution offers a fresh account of evolution consistent with Charles Darwin's own account of a cooperative, inter-connected, buzzing and ever-changing world. Told in accessible language, treating evolutionary change as a cooperative enterprise brings some surprising shifts from the traditional emphasis on the dominance of competition. The book covers many evolutionary changes reconsidered as cooperation. These include the cooperative origins of life, evolution as a spiral rather than a ladder or tree, humans as a part of natural systems rather than the purpose, relationships between natural and social change, and the role of the individual in adaptive radiation onto new ground. The story concludes with a projection of human evolution from the past into the future. 'Environmental studies courses have needed a book like Cooperative Evolution for a long time. It is a boon for those teaching the complexity of the evolutionary story.' – Dr John A. Harris, BSc(Hons) MSc PhD, School of Environmental Science, University of Canberra 'As a regenerative, holistic-thinking farmer I daily witness the results of cooperative evolution as the seasons unfold. A pleasure to read, Cooperative Evolution gives entry to recent thinking on evolutionary processes.' – David Marsh, MSA, 'Allendale', Boorowa, New South Wales, 2018 National Individual Landcarer Award recipient 'This book is an engaging new look at ideas about evolution as we know it today. In the hands of two eminent biologists, it presents an approachable yet challenging argument. I heartily recommend it.' – Emeritus Professor Sue Stocklmayer AO, BSc MSc PhD, Centre for the Public Awareness of Science, The Australian National University

Smart Business Networks Peter H.M. Vervest 2005-12-14 Scientists from management and strategy, information systems, engineering and telecommunications have discussed a novel concept: Smart Business Networks. They see the future as a developing web of people and organizations, bound together in a dynamic and unpredictable way, creating smart outcomes from quickly (re-)configuring links between actors. The question is: What should be done to make the outcomes of such a network 'smart', that is, just a little better than that of your competitor? More agile, with less pain, with more return to all the members of the network, now and over time? The technical answer is to create a 'business operating system' that should run business processes on different organisational platforms. Business processes would become portable: The end-to-end management of processes running across many different organizations in many different forms would become possible. This book presents you the outcomes of an energizing and new direction in management science.

The theme chapter focuses on digital platforms and how they can accelerate digital transformation across the region.

Skyfaring Mark Vanhoenacker 2015-06-02 A poetic and nuanced exploration of the human experience of flight that reminds us of the full imaginative weight of our most ordinary journeys—and reawakens our capacity to be amazed. The twenty-first century has relegated airplane flight—a once remarkable feat of human ingenuity—to the realm of the mundane. Mark Vanhoenacker, a 747 pilot who left academia and a career in the business world to pursue his childhood dream of flight, asks us to reimagine what we—both as pilots and as passengers—are actually doing when we enter the world between departure and discovery. In a seamless fusion of history, politics, geography, meteorology, ecology, family, and physics, Vanhoenacker vaults across geographical and cultural boundaries; above mountains, oceans, and deserts; through snow, wind, and rain, renewing a simultaneously humbling and almost superhuman activity that affords us unparalleled perspectives on the planet we inhabit and the communities we form.
