**Green Boating** Misse Wester 2009-04-14 The coastal and archipelago areas in the Baltic Sea are popular destinations for a number of tourists. An important group of tourists is boaters, who visit the coastal areas during a short summer period. Boat owners are sometimes pictured as having a great interest for the nature and a willingness to do right. Pollution from pleasure boats such as discharges of oil and fuel, antifouling paints and cleaning agents have a negative impact on the coastal environment. Environmentally sound alternatives exist to some extent, but are not very common. Sustainable alternatives for boaters are lacking behind. One of the underlying purposes of this study was to understand how we can help boat owners change their behaviour and decrease the negative impact on the marine

environment. The survey among boaters has been conducted in Finland, Sweden and Denmark with a web based survey ordered by the Keep Sweden Tidy Foundation together with Keep the Archipelago Tidy Association in Finland and the Danish Outdoor Council. The research was performed by SIFO Research International.

**Internal Combustion Engines** Institution of Mechanical Engineers 2014-10-10 This book presents the papers from the Internal Combustion Engines: Performance, fuel economy and emissions held in London, UK. This popular international conference from the Institution of Mechanical Engineers provides a forum for IC engine experts looking closely at developments for personal transport applications, though many of the drivers of change apply to light and heavy duty, on and off highway, transport and other sectors. These are exciting times to be working in the IC engine field. With the move towards downsizing, advances in FIE and alternative fuels, new engine architectures and the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO2 emissions and the dependence on oil-derivate fossil fuels whilst meeting the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American and Japanese regulations. How will technology developments enhance performance and shape the next generation of designs? The book introduces compression and internal combustion engines' applications, followed by chapters on the challenges faced by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons. presents the latest

requirements and challenges for personal transport applications gives an insight into the technical advances and research going on in the IC Engines field provides the latest developments in compression and spark ignition engines for light and heavy-duty applications, automotive and other markets

Women and Empire 1750-1939 Elizabeth Dimock 2021-12-17

First published in 2008. *Women and Empire, 1750-1939* functions to extend significantly the range of the *History of Feminism* series (co-published by Routledge and Edition Synapse), bringing together the histories of British and American women's emancipation, represented in earlier sets, into juxtaposition with histories produced by different kinds of imperial and colonial governments. The alignment of writings from a range of Anglo-imperial contexts reveals the overlapping histories and problems, while foregrounding cultural specificities and contextual inflections of imperialism. The volumes focus on countries, regions, or continents formerly colonized (in part) by Britain: Volume I: Australia, Volume II: New Zealand, Volume III: Africa, Volume IV: India, Volume V: Canada. Perhaps the most novel aspect of this collection is its capacity to highlight the common aspects of the functions of empire in their impact on women and their production of gender, and conversely, to demonstrate the actual specificity of particular regional manifestations. Concerning questions of power, gender, class and race, this new Routledge-Edition Synapse Major Work will be of particular interest to scholars and students of imperialism, colonization, women's history, and women's writing.

*Chemistry and Technology of Lubricants* Roy M. Mortier 2013-06-29 The use of lubricants began in ancient times and has developed into a major international business through the need to lubricate machines of increasing complexity. The impetus for lubricant development has arisen from need, so lubricating practice has preceded an understanding of the scientific principles. This is not surprising as the scientific basis of the technology is, by nature, highly complex and interdisciplinary. However, we believe that the understanding of lubricant phenomena will continue to be developed at a molecular level to meet future challenges. These challenges will include the control of emissions from internal combustion engines, the reduction of friction and wear in and continuing improvements to lubricant performance and machinery, life-time. More recently, there has been an increased understanding of the chemical aspects of lubrication, which has complemented the knowledge and understanding gained through studies dealing with physics and engineering. This book aims to bring together this chemical information and present it in a practical way. It is written by chemists who are authorities in the various specialisations within the lubricating industry, and is intended to be of interest to chemists who may already be working in the lubricating industry or in academia, and who are seeking

a chemist's view of lubrication. It will also be of benefit to engineers and technologists familiar with the industry who require a more fundamental understanding of lubricants.
